May 2026

Teen Chapters: Thesis · Getting Started · AI Prompting 2026

Prepared by **Imran Hassan**

Chapter 1 — Agent Factory Thesis

"AI ke daur mein companies software sell nahi karenge — balkay AI Employees (Digital FTEs) banayengi aur deploy karenge."

Bunyadi Alfaz (Key Definitions)

1 Agent Factory

Ek spec-driven, human-supervised process jisme AI Workers design, build aur deploy kiye jaate hain. Insaan supervise karta hai — AI execute karta hai.

2 Digital FTEs (Full-Time Employees)

AI "kaamgaar" jo specific roles ke liye bane hain jaise customer support, data analysis, sales. Yeh tools use karte hain aur dusre specialists ke saath coordinate karte hain.

3 AI-Native Companies

Woh companies jahan workforce zyada tar AI ki hogi — aur product wahi hoga jo yeh AI workforce produce kare.

10-80-10 Rule

Steve Jobs ke management approach se liya gaya:

Hissa	Kaun	Kya Karta Hai
10%	Insaan	Vision, constraints aur intent set karta hai
80%	AI Workers	Kaam execute karte hain aur coordinate karte hain
10%	Insaan	Review, refine aur approve karta hai

Cursor ne bataya ke February 2026 tak unke 35% pull requests khud AI agents ne merge kiye.

Do Layer Model

Edge Layer

Personal agent jo aapki apni judgment aur authority represent karta hai — aapka "digital wakilkar".

AI Workforce Layer

Role-based Workers jo tasks execute karte hain aur verified outcomes deliver karte hain.

7 Zaroori Principles (Seven Invariants)

#	Naam	Matlab
1	Human Principal	Insaan hi intent, budget aur authority set karta hai
2	Delegate Required	Personal agent jo aapki taraf se workforce manage kare (OpenClaw)
3	Management Layer	Workers ko hire, assign, govern aur retire karna (Paperclip)
4	Per-Worker Engines	Har agent apna runtime chunata hai — reliability aur cost ke hisaab se
5	System of Record	Authoritative data store — Workers yahan se read/write karte hain
6	Expandable Workforce	Zaroorat ke hisaab se nayi capabilities add karni

#	Naam	Matlab
7	Nervous System	Events, durability aur coordination ka dhaacha (Inngest)

Reference Implementation (2026)

- **Delegate:** OpenClaw
- **Management Layer:** Paperclip
- **Engines:** Dapr Agents, Claude Managed Agents, OpenAI Agents SDK
- **Nervous System:** Inngest
- **Skill Format:** Agent Skills (agentskills.io)

Mustaqbil — Future Trajectories

- 1 **Physical AI Workers** — Same architecture robots aur embodied systems mein extend hogi
- 2 **Autonomous Economic Agents** — AI khud independent market participant ban jaye
- 3 **Cross-company Mobility** — Ek AI worker kai companies mein kaam kar sake

Asaan Alfaaz Mein: "Insaan sirf batata hai kya karna hai. AI karta hai. Insaan check karta hai."

Chapter 2 — Getting Started (Shuruwat Kaise Karein)

"Months ki bajaye kuch dinon mein productive AI skills seekh sakte ho — structured crash courses ke zariye."

Seekhne Ka Tarika

- 1 **Overview lo** — poori picture samjho
- 2 **Important topics identify karo** — kya zaroori hai
- 3 **80% essential cheezein master karo** — aur saath mein real kaam bhi karo

Traditional slow learning se burnout hota hai — yahan fast aur practical approach hai.

Kitna Waqt Lagega?

Waqt	Kya Milega
6 Ghante	Bunyadi competency — Course 1-2 + ek mode course
Ek Weekend	Pehla Digital FTE deploy — Course 7-9
Ek Mahina	Poori Agent Factory stack mein maharat

3 Layer Mental Model

- 1 **General Agents Layer**

AI ko seedha kaam karne do — problem solve karwao apne liye.

2 **AI Workers Layer**

Specialized workers banao jo specific tasks karte rahein.

3 **AI-Native Company**

Sab workers mil ke ek poori company ban jaate hain.

Do Operating Modes

Mode 1 — Problem Solving

- Apna khud ka kaam AI se jaldi karwao
- Tools: Claude Code, OpenCode, Cowork
- Koi bhi professional use kar sakta hai
- Output: Completed work

Mode 2 — Manufacturing

- Autonomous AI Workers banao
- Engineers ke liye
- Seven Invariants follow karne padte hain
- Output: Workers jo khud kaam karte hain

16 Courses Ka Dhaacha

Group	Courses	Kya Seekhoge
Foundations	1–2	AI Prompting, AI era mein sochna
General Agents	3–4	Claude Code, Agentic Coding, Cowork
Mode 1	5–6	Problem Solving Principles, OpenClaw
Mode 2	7–16	Workers banana, evaluation, cloud deployment, payments

Apne Role Ke Hisaab Se Shuru Karo

Aap Kaun Hain	Kahan Se Shuru Karein
Bilkul Naya (Beginner)	Thesis → Course 1 → Course 2
Knowledge Worker	Course 1-2 → Course 4 → Course 5
Engineer	Course 1-2 → Course 3 → Course 7 → Course 8
Workforce Builder	Engineer path + Governance courses

Pehla Digital FTE — Fastest Route

~**12 Ghante** focused kaam se — Course 1-2, Course 3, Course 7-8, aur Course 13 (reader track)

Aakhir Mein Kya Milega?

- Kaam karta hua AI workforce
- Evaluation systems — AI sahi kaam kar raha hai ya nahi
- Audit trails aur governance — sab kuch accountable

Chapter 3 — AI Prompting in 2026 (90-Minute Crash Course)

"Har advanced technique in do mein se ek hai — sahi context andar lao, ya galat context bahar rakho."

Part 1 — AI Ko Cheezein Kaise Pata Hoti Hain

1 Novice vs Power User

Farq cleverness ka nahi — briefing quality ka hai.

Novice

Generic sawal
poochta hai

Power User

Files, context, constraints deta hai

"Kaun si car
khareedun?"

Insurance quotes + specs + spreadsheet upload karke structured
analysis maangta hai

2 Pretrained Knowledge

AI ne internet text padh ke seekha. Strong areas: cooking, movies, medicine. Weak areas: niche topics, regional history, cutoff ke baad ki news.

Zaroori aadat: Important cheezein primary sources se verify karo — AI confident lagta hai lekin galat bhi ho sakta hai.

3 Teen Retrieval Modes

Mode	Waqt	Kab Use Karein
Pretrained	Seconds	Definitions, general knowledge
Web Search	10-30 sec	Current events, recent news
Deep Research	Minutes	Detailed structured reports

Part 2 — AI Se Achhi Tarah Baat Karna

4 Context Sab Kuch Hai

AI sirf wahi jaanta hai jo aapne context window mein diya — files, chat history, aur prompt. Bahar kuch nahi.

Pehle socho: "Ek smart nayi colleague ko kya chahiye hoga yeh kaam achhi tarah karne ke liye?"

Projects Feature: Claude Projects mein persistent context store karo — bar bar paste nahi karna parega.

5 Extended Thinking (Gehri Soch)

Modern models pehle "sochte" hain, phir jawab dete hain. Invoke karne ke liye: **"Think hard"** likho ya interface toggle use karo.

Hard problems ke liye use karo — simple lookups ke liye nahi.

6 Sycophancy Se Bacho (AI Ki Haan-Mein-Haan)

AI hamesha agree karna chahta hai. Isse bachne ke liye neutral framing use karo.

Galat

"Don't you think X is better?"

Sahi

"Compare A aur B. Dono ko cost, risk, time par score karo."

Rubric use karo — named checklist with numbers — honest feedback milti hai, vague praise nahi.

7 **Brainstorm-Iterate Loop — Sabse Powerful Habit**

- 1 Sab relevant context pehle load karo
- 2 3-5 options maango — sirf ek nahi
- 3 Specific feedback do ("Option 1 pasand hai lekin chhota chahiye")
- 4 Phir 3-5 nayi options maango
- 5 Tab tak karo jab tak genuinely acha lage
- 6 Tabhi detail mein expand karne ko kaho

Writing ke liye: Pehle outline banao, phir draft. Outline level par zyada iterate karo — wahan sabse zyada leverage milti hai.

Part 3 — Text Se Agay (Multimodal)

8 **Images, Audio, Video**

Images Input: Scenes, objects, whiteboards, handwriting — acha kaam karta hai. Fine details aur chhoti print — kamzor.

Designer Diagrams Bina Design Skills (10-15 min):

- 1 Claude se SVG diagram banwao

- 2 2x resolution mein PNG render karo
- 3 ChatGPT mein paste karo — polish karne kaho
- 4 3-4 rounds mein iterate karo

Audio: Meeting record karo → SOAP format summary maango → action items lo.

9 Chhoti Apps Banana

Ek single prompt se games, websites, tools ban sakte hain — **Artifacts** (Claude) ya **Canvas** (ChatGPT) mein.

Kab Kaam Karta Hai

- Single-screen tools
- No accounts needed
- No external services

Kab Nahi Chalta

- Multiplayer over internet
- Real-time AI feedback

Prompt Structure: Goal (kya kare) + Input (user kya dega) + Output (user kya dekhega)

10 Data Analysis

Spreadsheet upload karo → plain English mein analysis maango → AI code likhta hai, run karta hai, result deta hai.

Hamesha poochho: "Code bhi dikhao jo tumne run kiya" — warna AI guess karke jawab de sakta hai bina calculate kiye!

Part 4 — Safely Kaam Karna aur Tools

11 Desktop Apps aur Permissions

AI tools files delete aur edit kar sakte hain — **Recycle Bin mein nahi jaata!**

Safe Workflow:

- 1 Task batao
- 2 Pehle plan maango — action nahi
- 3 Plan carefully review karo
- 4 Tabhi approve karo

Shuru mein sirf read-only access do — trust bane tabhi permissions badhao.

12 Cost, Speed aur Model Choice

Type	Cost	Speed
Text	Cents ke fraction	Seconds
Speech	Cents per minute	Seconds
Images	Kuch cents	10s seconds
Video	Dollars	Minutes
Deep Research	Cents to quarters	Minutes

Kaunsa Model Kab:

Model	Best For
Claude	Reasoning, long docs, code, diagrams/SVG
ChatGPT	Image generation, voice mode

Model	Best For
Gemini	Web search, deep research
DeepSeek	Open-source, sasta, 1M token context

13 Models Se Models Check Karwao

Jab ground truth na ho — alag model families se cross-check karo.

Level	Tarika
Halka	Ek rubric-based critique pass
Darmiyana	Self-critique loop — score 1-10, improve, 9+ tak repeat
Bhaari	Multi-model loop — Model A draft kare, Model B grade kare, Model A decide kare

Do alag model families ka score zyada reliable hota hai ek model ke bade score se.

6 Aham Principles — Yaad Rakho

#	Principle	Matlab
1	Context beats cleverness	Briefing quality sabse zyada matter karti hai
2	Structure pehle, draft baad mein	Outline par iterate karo — prose baad mein
3	Rubric use karo	Sycophancy se bacho — numbered criteria force karo
4	Multiple models try karo	Alag models alag errors pakarte hain
5	Important claims verify karo	Confident jawab bhi galat ho sakta hai

#	Principle	Matlab
6	Read-only se shuru karo	Trust build karo, phir permissions badhao

Kul Baat: AI sirf ek tool nahi — ek workforce hai. Sahi context do, iterate karo, verify karo. Bas.
