

Important Keywords — All 7 Modules

Panaversity Agent Factory AI Prompting 2026

Prepared by: Imran Hassan

MODULE 1 — FOUNDATIONS

MODULE 2 — PROMPTING

MODULE 3 — WHAT AI IS

MODULE 4 — SAFETY & TOOLS

MODULE 5 — MARKDOWN & HTML

MODULE 6 — CODE

MODULE 7 — SKILLS & CONNECTORS

Module 1 — AI Agent Factory Foundations (15 Keywords)

KEYWORD	MEANING
Digital FTE	Full-Time Equivalent — AI agent jo ek human employee ki tarah kaam kare autonomously, bina rest ke 24/7
AI-Native Company	Woh business jo minimal human staff ke saath mostly AI agents se chalti ho — maximum leverage, minimum headcount
System of Record	Single verified authoritative source of truth — jab yahan update hoti hai to sari channels automatically update ho jaati hain
Human Oversight	Qualified insaan ka AI output check karna before wo client/public tak pohonche — Four Critical Elements mein se ek
Domain Expertise	Kisi specific field ka deep knowledge jo AI agent mein encode hota hai — e.g., legal rules, medical protocols
Structured Specifications	Clear, organized format mein likhi gayi instructions AI agent ke liye — vague nahi, explicit aur verifiable
Engineering Architecture	Technical design/structure jis par AI agent build hota hai — MCP, agents, tools ka combination

KEYWORD	MEANING
Leverage Principle	AI agents maximum output minimum headcount ke saath deliver karte hain — 12 log vs 500 log same kaam
Mode 1	AI ko apne existing daily kaam mein use karna — reports, notes, briefings faster banana (personal productivity)
Mode 2	Autonomous AI agents build karna aur deploy karna — engineering skills chahiye, systems banana hota hai
Layer 5 — Applications	Jensen Huang ke 5-layer model ka woh layer jahan domain-specific AI applications banti hain — Digital FTE yahan hoti hai
Four Critical Elements	Domain Expertise + Structured Specs + Engineering Architecture + Human Oversight — sab zaroori hain, koi ek miss = failure
Propagation	System of Record update hone par sari 4 channels (Book, TutorClaw, Skillpack, Derivative Books) mein automatically update aana
TutorClaw	24/7 AI-powered support channel — students ke questions ka real-time jawab
Derivative Books	Main System of Record se nikale gaye specialized books — alag audiences ke liye tailor kiye gaye

Module 2 — AI Prompting in 2026 (15 Keywords)

KEYWORD	MEANING
Pretrained Mode	AI sirf apni training data use karta hai — koi live web access nahi, training cutoff ke baad ki info nahi hoti
Web Search Mode	AI single-pass live internet search karta hai — recent info milti hai lekin shallow scan hoti hai
Deep Research Mode	AI multiple sources par comprehensive scan karta hai — minutes lagta hai, comprehensive aur thorough output

KEYWORD	MEANING
Context Window	Woh "desk" jis par AI ek waqt mein sab kuch rakh sakta hai — 750,000+ words tak, jo desk par nahi wo invisible
Context Contamination	Purani conversation ki info naye task ko galat direction mein le jaaye — fix: fresh conversation start karo
Sycophancy	AI ki trained tendency agree karne ki — positively framed question = yes answer, genuine analysis nahi
Sycophancy Neutralization	Balanced rubric use karna: 3 pros + 3 cons + 3 risks + numerical score 1-10 — forced critical thinking
Reasoning / Thinking Mode	"Think carefully" se AI extended step-by-step reasoning use karta hai — complex problems ke liye better results
Brainstorm-Iterate Loop	Context load → 3-5 options maango → explicit feedback do → 2-3 rounds iterate → grade 1-10 → 9.5 tak refine karo
Multimodal	AI jo text ke ilawa images, voice, data, video bhi process kar sake — different modalities different costs
Jagged Capabilities	Har model alag cheezon mein alag strong/weak hota hai — koi universal "best" model nahi hota
Tool Loyalty (avoid)	Ek hi AI tool use karte rehna — avoid karo, har task ke liye best tool choose karo, quarterly re-evaluate karo
Iteration Cost	Ek try karne ki cost — text mein fractions of a cent (50+ daily), video mein dollars per clip (2-3 max)
Forcing Incantation	"Write and run code to answer this. Show me the code you ran." — AI ko genuinely compute karne par majboor karna
Briefing Principle	AI ko brief karo jaise ek smart colleague ko — "Would a smart person have enough info to do this job well?"

Module 3 — What AI Actually Is (15 Keywords)

KEYWORD	MEANING
Prediction Machine	AI ka core function — next plausible text predict karna, database se truth retrieve nahi karna
Pretrained Knowledge	Jo AI ne training ke doran seekha — baad mein update nahi hota, training cutoff ke baad ki info nahi
Frozen Weights	Training ke baad AI ke parameters lock ho jaate hain — chat mein kuch batana model permanently nahi badalta
Hallucination	AI ka confident but fabricated output — yeh bug nahi, core mechanism hai; sach aur jhooth same fluency se aate hain
No Truth Verification	AI ke paas koi internal fact-checking organ nahi — fluent answer = accurate answer ki guarantee bilkul nahi
Token-Based Processing	AI letters nahi, word-chunks (tokens) process karta hai — isliye exact letter counting unreliable hoti hai
Context Window — Reading Desk	Jo info desk par hai wahi AI dekhta hai — jo desk par nahi wo exist nahi karta AI ke liye
Confidence as Learned Style	AI ka confident tone = training se seekha style hai, truth ka signal nahi — statistics bhi same confidence se fabricate karta hai
Jagged Frontier	AI ki competence human intuition se match nahi karti — letter counting fail, complex legal analysis perfect
Predictor	AI jo sirf text output kare — koi tool nahi, koi action nahi, human manually sab kuch karta hai
Agent	Predictor + tools = AI jo actions le sake, results receive kare, loop automatically continue kare
Reasoning as Prediction-Plus	Extended reasoning = AI apne thinking steps predict karta hai, unhe context mein rakhta hai, phir better final answer predict karta hai

KEYWORD	MEANING
Fluency ≠ Accuracy	AI kuch bhi smoothly likh sakta hai — grammatically perfect jhooth bhi likhta hai same style mein
One-Time Learning	AI sirf training phase mein seekhta hai — deployment ke baad kuch naya permanently nahi seekhta
Statelessness	Har new session = blank slate — koi cross-session memory nahi jab tak external memory feature enable na ho

Module 4 — Working Safely & Choosing Tools (15 Keywords)

KEYWORD	MEANING
Permission Ladder	Read-only → Read/Write scoped → Tool-specific — AI trust earn kare phir permission badhao, kabhi day-one par full access nahi
Read-Only Access	AI sirf padh sakta hai, koi change nahi kar sakta — safest starting point, especially for sensitive data
Recycle Bin Bypass	AI desktop apps delete karte waqt Recycle Bin skip karte hain — permanently gone, koi undo nahi
Version Control	External system (Git etc.) jo file history save kare — AI ke file operations se pehle lazmi setup karo
Shadow Mode	AI real cases par decisions banata hai lekin wo execute nahi hote — production se pehle gap discover karo bina risk ke
Bulk Operation	Ek saath bohat saari files par same action — high risk, pehle sample test karo phir full batch approve karo
Safe Workflow	Describe → Plan → Review → Execute — review step kabhi skip mat karo, yahi safety net hai

KEYWORD	MEANING
Trust Through Demonstrated Reliability	Brand ya reputation par trust mat karo — sirf proven performance ke baad trust badhao
Scoped Permissions	Sirf specific folder ya tool ka access dena — unlimited access kabhi nahi dena, scope = task size
Cost Hierarchy	Text (cheapest, fractions of cent) → Speech (cents/min) → Image (tens of seconds) → Video (most expensive)
Speed Hierarchy	Text (milliseconds) → Image (tens of seconds) → Speech (cents/min) → Video (minutes per clip)
Iteration Cost Shapes Strategy	Mahange format mein pehle prompt engineering mein invest karo — saste text mein freely 50+ iterations karo
Plan-Then-Approve Workflow	AI pehle plan banata hai — user review kare, edit kare, PHIR execute hone de — kabhi auto-execute nahi
Model Strengths — Mid 2026	Claude = reasoning/long docs, ChatGPT = images/voice, Gemini = web search/deep research, Meta AI = free/social
No Universal Best Model	Capabilities "jagged" hain — har model kuch tasks mein strong, kuch mein weak; task ke hisaab se choose karo

Module 5 — Markdown In, HTML Out (15 Keywords)

KEYWORD	MEANING
Markdown	Lightweight text format (headings, lists, code blocks) — AI input ke liye best, machine-parseable, ambiguity-free
HTML	Rich formatted output — human reading, sharing, aur browser rendering ke liye best

KEYWORD	MEANING
Asymmetry	Markdown = machine input, HTML = human output — dono alag purposes serve karte hain, interchange mat karo
Ordered List (Numbered)	Sequential steps — 1, 2, 3 — order matters, AI sequence strictly follow karega
Unordered List (Bullets)	Independent parallel items — AI parallel ya random order mein run kar sakta hai, koi dependency signal nahi
Fenced Code Block	Triple backticks (```) — AI ko batata hai "yeh data/example hai, instruction nahi" — security ke liye critical
Specification Skeleton	6 sections: Goal + Context + Requirements + Hard Constraints + Out of Scope + Expected Output
Out of Scope	Explicitly likho kya mat banao — over-delivery aur extra features rokta hai, AI ko boundary deta hai
Hard Constraints	Non-negotiable limits jo AI must follow — budget, deadline, platform, language, file size
Expected Output	Fenced example ke saath batao output kaisa hoga — "show don't tell" — ek example teen paragraphs se behtar
Declarative Heading	Heading sirf label nahi, constraint bhi bataye — "## Budget: PKR 50,000 hard ceiling" — actionable hona chahiye
Specification Grading	Spec ko 9+/10 tak iterate karo before handoff — "fixing spec = 1 min, fixing agent output = 1 afternoon"
Spec-to-HTML Pipeline	Markdown spec → AI process → HTML delivery — structured input se rich human-readable output
"Who Reads Last?" Rule	Human padhe = HTML output, Machine/AI padhe = Structured Markdown — reader ke hisaab se format choose karo
Verifiable Requirement	Requirement jo check ki ja sake — "fast" nahi, "under 2 seconds response time" likho — testable hona chahiye

Module 6 — Code You Never Write (19 Keywords)

KEYWORD	MEANING
VPRF Test	Volume + Precision + Repetition + Files — in mein se 2+ present hoon to code commission karo, conversation se kaam nahi chalega
Volume (V)	Itna data jo manually handle impossible ho — hundreds ya thousands of rows/files
Precision (P)	Accuracy matter kare — round numbers ya estimates acceptable nahi, exact calculation chahiye
Repetition (R)	Same task baar baar aaye — script ek baar banao, baar baar chalo without rebuilding
Files (F)	Data files ya records involved hoon — database, CSV, Excel, PDFs, etc.
Verification Tell	Signs ke AI ne compute nahi kiya, sirf estimate kiya — "approximately", "seems like", no code block shown
Forcing Computation	"Write and run code. Show me the exact code you ran." — AI ko actually calculate karne par majboor karna
Five-Part Brief	Goal + Input + Rules (domain knowledge) + Edge Cases + Output — complete code commission format
Pre-Brief Inspection	Data pehle upload karo, AI se ambiguities list karwao — phir brief likho with correct rules and edge cases
Level 1 Verification	Known-answer test — pre-calculated slice par run karo, manually check karo match karta hai ya nahi
Level 2 Verification	Reality/sanity check — kya output real-world sense banta hai? Totals, ranges, counts reasonable hain?
Level 3 Verification	Plain-English replay — AI se logic plain language mein explain karwao, hidden assumptions surface hoti hain

KEYWORD	MEANING
Level 4 Verification	Adversarial pass — deliberately edge cases test karo — empty data, duplicates, boundary values
Level 5 Verification	Cross-model check — same brief + data dusre AI model ko do, outputs compare karo for discrepancies
Script Keeping	brief.md + script.py dono save karo my-scripts/[task]/ mein — ek afternoon ka kaam permanent asset ban jata hai
Multiplication Effect	Ek baar ki mehnat = baar baar ki value — har future user aur har future run ke liye free
Browser Sandbox	Claude.ai mein zero-install code run — session ke baad files vanish, no scheduling, no system integration
Terminal Surface	Claude Code/OpenCode — cron scheduling, persistent scripts, network drive access, email integration — full automation
Desktop App Surface	Cowork/OpenWork — visual plan-then-approve workflow, best for non-technical users, file operations visible

Module 7 — Skills & Connectors Crash Course (20 Keywords)

KEYWORD	MEANING
Skill	Reusable "how-to" instructions save karna — baar baar same method explain karna band karo (recipe card)
Connector	AI ko apps/data tak safe access dena — baar baar copy-paste karna band karo (kitchen tools)
Skill Trigger Test	"Main baar baar HOW explain karta hun..." → Skill chahiye — method/instructions save karo
Connector Trigger Test	"Main baar baar DATA copy-paste karta hun..." → Connector chahiye — direct data access do

KEYWORD	MEANING
Custom Instructions	Global preferences jo har conversation par automatically apply hote hain — e.g., language preference, tone
Per-Conversation Activation	Connectors ko globally enable mat karo — sirf us conversation mein enable karo jahan zaroorat ho
Read-Only Permission	Connector sirf padhe, modify na kare — legal, financial, sensitive data ke liye always read-only start karo
Read-Write Permission	Connector data read + write/modify kare — sirf tab dena jab actual modification zaroor ho workflow mein
Progressive Disclosure	AI pehle skill summaries load karta hai — full instructions sirf tab kholti hain jab skill match hoti hai request se
Skill Activation	Claude request ko skill description se match karta hai — match hone par automatically skill load aur apply hoti hai
Vague Description = Failure	Generic description jaise "useful for development" = skill kabhi activate nahi hogi — specificity lazmi hai
Description Formula	Action + Input + Output + Trigger Conditions — yeh sab description mein hona chahiye reliable activation ke liye
Slash Commands (/)	Cowork, Microsoft 365 add-ins, aur Claude Code mein skills explicitly browse aur pick karne ka shortcut
"Interactive" Badge	Connector supports two-way real-time messaging — sirf listing nahi, back-and-forth communication bhi
Skill-Creator Tool	Non-programmers ke liye built-in tool — plain English conversation se skill banao, koi coding knowledge nahi chahiye
Skill + Connector Pipeline	Connector fetches DATA (data access) → Skill shapes it with METHOD (analytical rules) → Final Output
One-Off Question Rule	Single-use questions ke liye Skill/Connector mat banao — good prompting + Web Search kaafi hai, overhead justify nahi hota

KEYWORD	MEANING
Tool Access Setting	Multiple Connectors ke conversation mein load hone ka control — kaun si active ho is session mein
Free Plan Connector Limit	Free Claude plan mein sirf 1 custom connector allowed hai — paid plan mein zyada milte hain
Code Execution Capability	Settings → Capabilities → enable karo — DOCX, PDF, Excel, PowerPoint directly Claude se banana possible hota hai

Cross-Module Master Keywords (10 Most Important)

Yeh keywords multiple modules mein baar baar aate hain — exam mein sabse zyada important hain

KEYWORD	MODULES	CORE MEANING
Hallucination	M1, M3	AI ka confident fabrication — design flaw nahi, core prediction mechanism hai; truth organ absent hai
Context Window	M2, M3	AI ka "working memory" / "reading desk" — jo yahan nahi wo invisible hai, session end par reset
Statelessness	M2, M3	Har new session = blank slate — koi cross-session memory nahi jab tak external memory feature enable na ho
Sycophancy	M2, M3	AI haan kehna chahta hai — neutralize karo balanced rubric se, never ask "is this good?"
Shadow Mode	M4	Production se pehle parallel validation — AI ke decisions note karo lekin act mat karo unpar, gaps find karo
Permission Ladder	M4, M7	Trust earn karo phir access badhao — kabhi day-one par full/admin access nahi dena

KEYWORD	MODULES	CORE MEANING
Specification Writing	M1, M5	Clear structured requirements — vague brief = vague output, always grade spec before handoff
Jagged Frontier	M2, M3	AI competence unpredictable — easy tasks (letter count) fail, hard tasks (legal analysis) succeed
Verification	M6	AI ke output ko trust se pehle verify zaroor karo — 5 levels hain, appropriate level use karo
Multiplication Effect	M6, M7	Ek baar ki mehnat (script ya skill) = permanent reusable asset — value har future use mein multiply hoti hai
